1. TEETH CLEANING & POLISHING

1.1 Scaling

Start From IDR 300.000,-

Calculus is a contributing factor to gum disease, its rough surface retains plaque which causes irritation to the gum. Routine scaling and polishing visits also provide us with information about the health of our teeth and oral cavity. By having good oral hygiene habits, you will have a clean and healthy mouth and will be able to smile confidently.

1. TEETH CLEANING & POLISHING

1.2 Dental Spa

Start From IDR 500.000,-

A dental spa is a treatment that provides spa treatments and dental hygiene. Supervised by a professional dentist, dental spa including dental and spa treatments, which are combinations of scaling teeth, stains removing and gum massage which can relax the oral cavity.

1. TEETH CLEANING & POLISHING

1.3 Smoke Stain Remover

Start From IDR 350.000,-

Tooth stain is a color that sticks to the surface of the tooth, usually due to the color of food, drink, or nicotine, especially the substance that produces dental stains. Smoking habits increase the factors that cause abnormalities in the oral cavity, one of which can cause stains on the tooth surface.

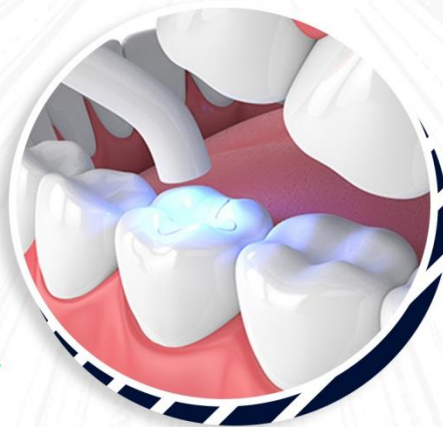

2. Tooth Cavity Treatment

2.1 Simple Tooth Filling

Start From IDR 300.000,-

The procedure for a dental filling is used to repair minor fractures or decay in the teeth, as a form of restorative dental treatment. A dental filling can help to even out the surface of the tooth and improve the function of the jaw for biting and chewing. Types of fillings : Composite fillings, Glass ionomer, Cement, Amalgam.

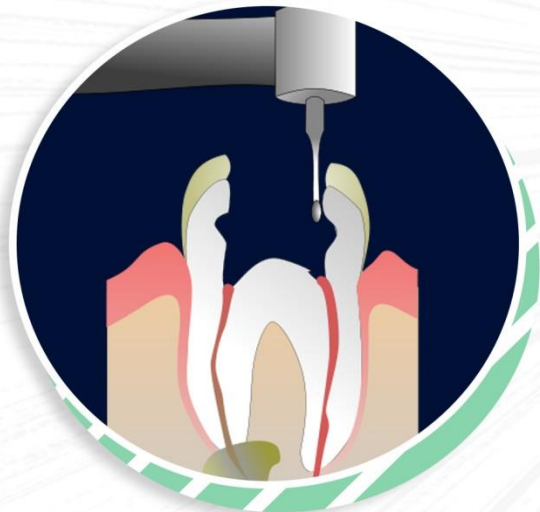

2. Tooth Cavity Treatment

2.2 Root Canal Treatment

Start From IDR 600.000,-

Root canal treatment is designed to remove bacteria from infected root canals, prevent re-infection of the tooth and save the natural tooth. The canal treatment procedure is painless, the inflamed or infected pulp is removed and the inside of the tooth is carefully cleaned and disinfected, then filled and sealed with a restoration.

3. Tooth Extraction

3.1 Simple Tooth Extraction

Start From IDR 300.000,-

Tooth extraction is required when the tooth can no longer be preserved in the oral cavity, for example if conservation treatments fail, severe periodontal disease, extensive caries, periapical infection or pulpal abnormalities.

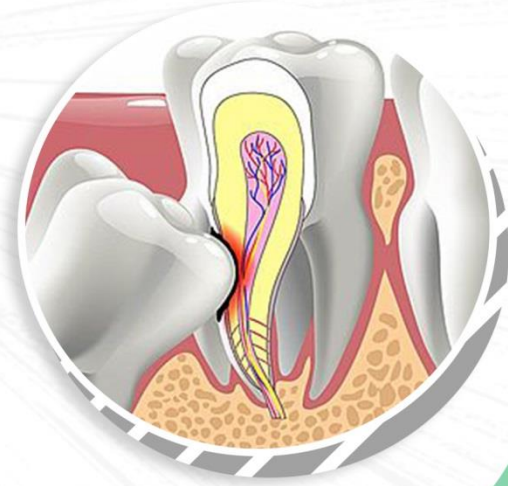

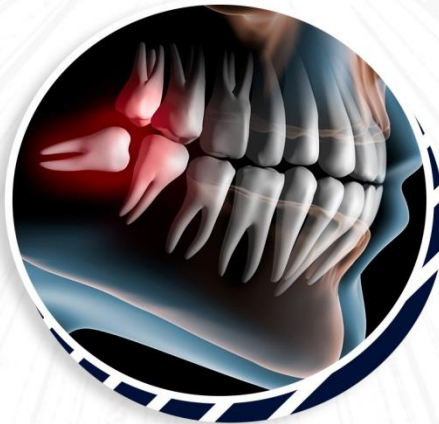

3. Tooth Extraction

3.2. Wisdom Tooth Extraction

Start From IDR 1.500.000,-

A condition when a tooth fails to fully erupt (penetrate) from the gums. Teeth that don't come out completely (crookedly) occur because there is a lack of space in the bone. The third molars (wisdom teeth), particularly in the lower jaw, are the last to come out and are more likely to grow sideways. Because they are crowded and difficult to clean, damage to adjacent teeth, as well as gum disease, is common. Surgical removal of the affected tooth is often recommended, but is optional unless the problem develops.

4. Removable Denture

Start From IDR 1.000.000,-

Dentures are removable replacements for missing teeth made of acrylic (plastic), nylon or metal. Dentures or dentures fit over the gums to replace missing teeth and eliminate potential problems caused by missing teeth.

5. Tooth Crowning

Start From IDR 3.000.000,-

Crowns are tooth-shaped "caps" that can be placed over your teeth. Think of it like a cap that fits your teeth. Crowns restore the shape, size, strength and appearance of the teeth.

6. Tooth Bridges

Start From IDR 3.000.000,-

A dental bridge is when you lose a tooth, your dentist can close it by bridging the gaps in the missing tooth in your smile with a dental bridge. Dental bridges are dentures (called pontics) that are held in place by abutments on either side of the gap. While pontics can be made of a variety of materials such as gold, they are usually made of porcelain to blend aesthetically with your natural teeth.

7. Implant

Start From IDR 12.000.000,-

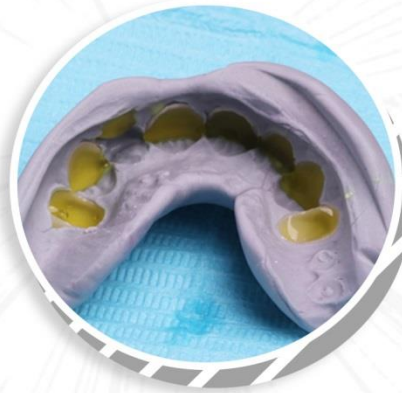

Dental implants are titanium metal poles that replace the missing part of the root of a tooth. Dentures (crowns) are placed on the abutments of dental implants, replacing your missing teeth and giving you the appearance of natural teeth.

8. Veneer

Start From IDR 650.000,-

Veneers are thin artificial crowns that are placed over the front (shown) portion of the teeth. They look like real teeth. Veneers can be used to correct a variety of dental problems, such as: stained teeth that cannot be whitened with bleaching.

9. Orthodontic Treatment

9.1 Metal Braces

Start From IDR 3.000.000,-

Braces, also known as orthodontic braces, are dental devices primarily used to straighten or improve the alignment of teeth. They can be recommended for patients with crooked and crowded teeth. Braces improve the patient's facial appearance and make proper oral care easier and more effective. Therefore, they can help patients maintain good dental health in the long term.

9. Orthodontic Treatment

9.2 Clear Aligner

Start From IDR 13.500.000,-

Clear aligners are one of the easiest methods of straightening teeth. Clear aligners are transparent devices that cover the entire tooth, making it less visible. This makes clear aligners better aesthetically. Clear aligners can be removed by the patient himself.

10. Instant Perfect Whitening Treatment

Start From IDR 1.500.000,-

Teeth Whitening is a technique to improve the appearance of your teeth so that your teeth become whiter, have a beautiful smile and are more confident. The procedure is done by apply a tooth whitening gel on the outer surface of the tooth and then irradiated with whitening light to optimize and active the gel.

11. Diamond Teeth

Start From IDR 250.000,-

Diamond teeth is a procedure performed by attaching gems to the teeth as accessories to beautify the smile. The installation of gems on teeth is carried out in a simple and temporary way because it only involves gems and special glue.

12. Kids Dentistry

12.1 Flour Protection

Start From IDR 300.000,-

One way to prevent cavities in children is to provide fluoride protection treatment. The dentist will apply a fluoride gel to the outer layer of the tooth.

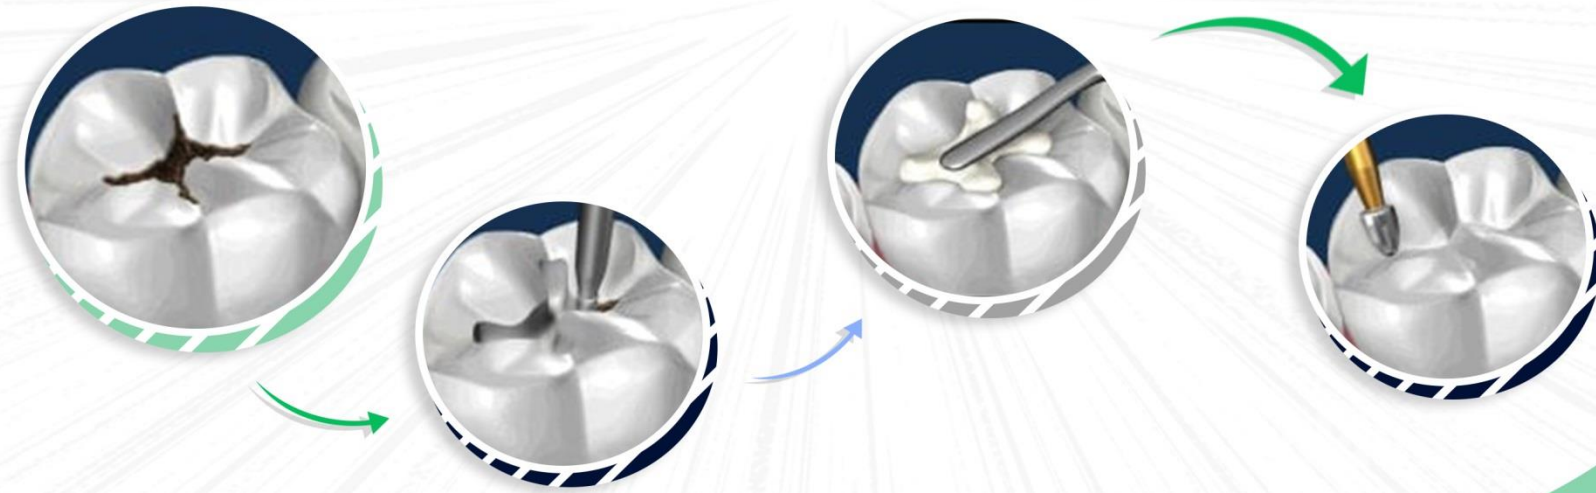

12. Kids Dentistry

12.2 Tooth Cavity

Start From IDR 200.000,-

Baby teeth have an important role for children in process of chewing, speaking, the process of child growth and development, and especially for the growth of permanent teeth later. If a child's tooth is hollow and sore, the child also becomes lazy to eat which can interfere with the child's growth and development due to lack of nutritional intake. If cavities is identified, the dentist will likely recommend an adhesive restoration, also known as a filling, depending on the condition and location of the tooth.

12. Kids Dentistry

12.3 Tooth Extraction

Start From IDR 200.000,-

Extractions is the removal of a tooth using a local anesthetic then extract the tooth using forcep. Ideally, baby teeth will begin to fall out one by one and be replaced by permanent teeth, by the time the child is 6-12 years old. However, sometimes dentists will suggest removing baby teeth as the best course of action when baby teeth are badly damaged.
